

FELIPE LAVÍN

PHOTOGRAPHER AND ARTIST

My work is based in photomontages and digital photography inspired on urban architecture, lines, perspectives and geometry. I am profoundly attracted to symmetry, especially when it manifests naturally within the city and relates to its surroundings. In my work, I try to change the observer's perception on daily locations, both highlighting and decontextualizing them to create new objects and elements. I mainly focus on buildings that form part of the urban environment and that have become transparent and monotonous with time. Sometimes I also work with landscapes and places away from the city. Several of my shots are taken in low angle to accentuate perspectives and prolong lines. I also create photo-montages generated by applying symmetry axes of an original shot, iterating the process until I achieve a harmonic and balanced result. In my recent work, I extract different geometric patterns from facades, using them as a mold for tessellation through digital montages. By this method I create new urban facades with exaggerated shapes imitating massive buildings.

SOLO EXHIBITIONS

-
- | | |
|------------------|---|
